

Teams Business Voice

Your employees can now use Teams Business Voice to make and receive calls to people outside your organization on desktop, laptop, smartphone, or tablet devices. Microsoft Teams is a digital hub for workplace chat, video meetings, calls, file storage, and application integration. The service integrates with Office 365 and has extensions that can integrate with non-Microsoft products.

✓ **One phone number across all Teams-enabled devices.**

This means no need for multiple phone numbers or juggling calls between a desk phone, computer, and mobile device.

✓ **Seamless interactions across platforms.**

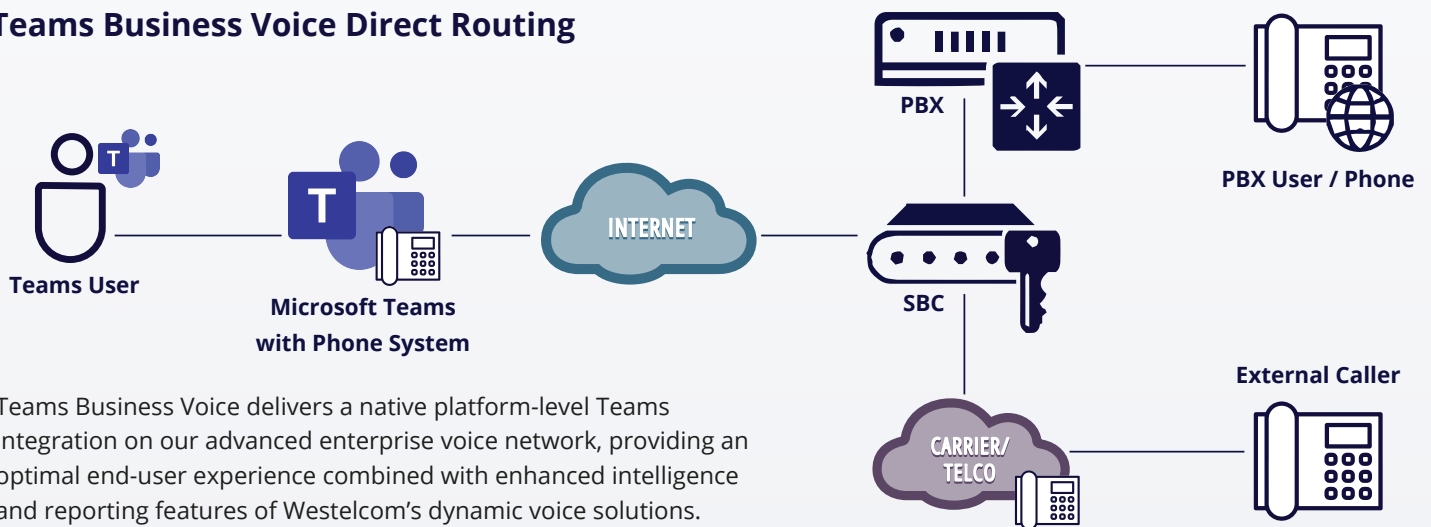

With the ability to call anyone, employees need not pause their work to move away from Teams to call external colleagues or customers.

✓ **Desk phones are optional.**

Since calls are made through computers, businesses can achieve cost savings by scaling back their investment in phones for every desk.
