Teo
A WESTELCOM SOLUTION

UC Virtual Machines

Introducing Teo UC, an advanced communication solution now available in a virtualized format, tailored to seamlessly integrate into existing setups. This software-centric approach eliminates the necessity for physical servers, streamlining setup processes and reducing overhead costs.

- Runs on existing virtualization environment
- Software only, no servers to ship or install
- Same capabilities as physical on-premises server

Key Advantages

- **Streamlined Management:** With fewer hardware components to oversee, customers can devote more attention to their core activities.
- **Expedited Installation:** Reduced lead times for installation mean quicker deployment and operational readiness.
- **Familiar Environment:** Virtualized Teo UC operates within systems customers are already familiar with, minimizing the learning curve.
- **Enhanced Data Security:** Offers a broader array of backup and restoration options, ensuring continuous data protection.
- **Server-Free Solution:** As a software-only solution, there's no need to handle physical servers, saving time and resources.
- **Comprehensive Feature Set:** Delivers the same functionalities as physical on-premises servers, coupled with the advantages of virtualization.
