

FRAUD ALERT. 0+1+1 Dialing Requires Authorization

Toll fraud scams are on the rise and hundreds of thousands of dollars in toll fraud can occur in just days or hours. Any unsecure phone system/PBX is vulnerable to toll fraud via phone system hacking. Hackers exploit weaknesses in the company's PBX system by figuring out voicemail pins and/or passwords and placing International calls over the lines associated. This derives income for the hacker, while you are left with the bill.

It is important that as a business at risk, you familiarize yourself with the potential security breaches associated with maintaining a phone system. Your business is ultimately responsible for maintaining the security of your phone system as well as the results of long distance or international traffic/charges in the event of hacking that occurs from a system not properly secured.

Please visit: fcc.gov/general/international-issues-guides for more info. Please take a moment to review these suggestions in an effort to protect your business from unwarranted charges.

NOTE: In an effort to protect you from international hacking, all international 0+1+1 dialing is automatically blocked. If you wish to remove this blocking and keep your overseas dialing active, please sign and return this document. Note: Dialing to Canada, Jamaica, Parts of Puerto Rico, Guam and the US Virgin Islands will not be blocked.

By signing, I authorize 011 dialing on our service. Should any hacking occur, we recognize we are responsible for any incurred charges. By doing nothing, International 011 dialing will be automatically blocked.

____ Check here if all lines, all locations are to be unblocked and allowed to dial internationally. Otherwise, please specify below which lines you would like unblocked. If more room is needed please add on a separate page or contact us for a listing of all phone numbers.
